

SHELL AND TUBE HEAT EXCHANGERS

+1 918 396 7200

**WE HAVE
WHAT IT TAKES
TO HELP MAKE
YOUR PROJECT
SUCCESSFUL**

**WORLDWIDE
EXCHANGERS**

WE ARE EXPERIENCED

Worldwide Exchangers, a SHECO Industries company, has been supplying shell and tube exchangers to customers across the globe in the natural gas processing, petrochemical, oil and gas refining, and other industries since 1991.

As with our air cooled heat exchangers, our shell and tube heat exchangers are industrial grade equipment engineered to withstand the harshest, most demanding of operating and environmental conditions. Discover the difference an engineered product can make.

RESULT GUARANTEED

The mass and heat transfer calculations for our air coolers are performed using the industry's highest standard thermal design partner and program, HTRI. Our application engineers can offer a transparent design process to meet any application with guaranteed results.

Worldwide Exchangers' extensive engineering capabilities allow us to offer complete exchangers, retrofit units, replacement bundles, retubes, parts, and field repair and service. From re-rates to finite element analysis, our engineers have the knowledge and experience to find a solution that works for your application.

The mechanical designs of the exchangers are offered in a wide range of materials from carbon steel and stainless steel to copper nickel and nickel alloys. We can offer most any TEMA configuration to fit your specific needs. Other features offered include strength welded tube-tubesheet connections, laser cut baffles, expansion bellows where required. We can also easily comply with API-660 construction where required.
